

Dimitri Nakassis is professor and chair of the Department of Classics at the University of Colorado Boulder. He received his degrees from the University of Michigan (BA, 1997) and the University of Texas at Austin (PhD, 2006). His research focuses on the material and textual production of early Greek communities, especially the Mycenaean societies of the Late Bronze Age. His book, *Individuals and Society in Mycenaean Pylos* (Brill 2013), developed new methods for investigating individuals named in the administrative Linear B texts and argued from this evidence that Mycenaean society was far less hierarchical and much more dynamic than it had been considered in the past. He's co-director of the Pylos Tablets Digital Project, a museum-based study of that digitally documents all the administrative documents from the "Palace of Nestor" at Pylos. He's also a field archaeologist who co-directs the Western Argolid Regional Project in southern Greece, a diachronic survey that investigates the terrestrial networks of the Peloponnese through intensive and systematic archaeological pedestrian survey alongside geomorphological, historical, and ethnographic studies
